

The Allogent™ Claim Allocation System for Windows

The Allogent claim allocation system for Windows provides you with a proven, fast and accurate means of producing charts and reports of insurance claim and policy allocations.

Results may be exported to your favorite analysis, drawing and word processing packages for easy presentation

- Flexible database structure allows easy import of existing data
- Multi-policyholder (insured) database for easy management of insolvencies and other carrier based considerations
- Fast! 500 policy, 800,000 claim allocations run in about 20 minutes (Windows XP system hardware 2.6 GHz, 512 meg. RAM). Other allocations run in minutes or seconds.
- Compare and contrast different allocation methodologies, trigger methods, insolvency scenarios, etc.

OVERVIEW

The complexities of long tail claim allocation and data management require serious software.

Insolvencies, inconsistent policy data, complex quota shares and many other factors combine to make accurate claim allocation a challenge. Sometimes even more difficult is the process of communicating these results.

The Allogent system works with you to make this process easier. From easy integration with existing data, to final reports and charts; Allogent works with you each step of the way.

Supported claim allocations include Carter-Wallace, Pro-Rata, Time on Risk, Bathtub and Owens-Illinois. Other allocation methodologies are easily added thanks to a state of the art, object oriented policy and claim database design.

The system features flexible design and licensing that allow easy and cost effective customizations.

Also, the allocation module accepts an infinite variety of limit and claim types. Indemnity and defense expense allocations are also supported.

The system integrates with our PolicyPicture product for coverage chart creation.

Together, the above features combine to provide you and your staff with an efficient tool for long-tailed claim analysis and management.

SPECIFICATIONS

To experience Allogent, you need:

- Any one of the following:
 - Microsoft Windows 95/98/Me
 - Microsoft Windows 2000/XP Professional or Home Edition (recommended)
- Personal computer requirements:
 - PC with 1.7 GHz Pentium processor or better (2.6 GHz recommended)
 - at least 512 MB of memory
 - Hard disk with at least 30 MB free space, more disk space required for coverage block data as necessary
 - One 3.5" disk drive or CD ROM drive
 - 800 x 600 or higher resolution monitor (17" 1280 x 1024 recommended)
- Printer requirements
 - Laser printer with 300 dpi or better resolution
 - Any color printer supported by the Windows operating systems
 - Any plotter supported by the Windows operating systems
- Data requirements
 - Allogent uses a Microsoft Access compatible database or can read data from Excel, Oracle, DB2, Sybase, Lotus, dBase, text and many other formats. The program can be custom engineered to use your existing attachment point or layer based policy database.
